

PRD: The Rahat Plane

1. Executive Summary & Vision

The Rahat Plane is a category-defining Sovereign Intent Runtime that transitions the user from the "Post-Chat" era to the "Human-at-the-Edge" paradigm.

We are moving away from Reactive Automation (prompting an AI for a result) toward Proactive Agency (an autonomous substrate that manages outcomes). The goal is Rahat (Relief)—the systematic elimination of decision fatigue and administrative burden across health, logistics, and ritual management.

2. Strategic Pillars

2.1 Sovereignty as Infrastructure

Trust must be silicon-deep. By anchoring the **Intent Ledger** on local M4 hardware, we ensure that intimate telemetry (HRV, caloric burn, family schedules) remains resident on the user’s physical hardware. Data is an extension of identity, not a product for cloud ingestion.

2.2 State-Level Continuity (The State Bus)

We reject siloed automation. The **Intent Ledger (SQLite)** serves as a unified context bus. If the **Scientist** agent identifies a recovery need, the **Foodie** agent automatically suppresses inflammatory options, and the **Voyager** agent adjusts travel pace for an upcoming trip.

2.3 Ambient Observation (The Vitality Pipeline)

The system relies on **Passive Ingestion**. By establishing a direct, local bridge from the **Apple Watch** to the Mac Mini, we eliminate manual tracking. The runtime observes biological and environmental states to detect "Deltas" from the registered Intent without user intervention.

3. The Agent Mesh (Modular Squad)

Agent	Persona	Strategic Mission
The Miya	Orchestrator	The "Foreman" who delivers insights with Dakhini wit. He manages notification priority to ensure zero attention leakage.
The Scientist	Vitality Lead	Manages the clinical trajectory for the 80kg July 2026 goal. Uses linear decay math to update caloric targets based on real time Apple Watch telemetry.

Matt Fraser	Performance	The elite coach for functional output. Audits CrossFit volume and ensures the user hits the 155kg deadlift target with zero guesswork on loading.
The Foodie	Compliance	Audits "hole-in-the-wall" authenticity while enforcing strict dietary constraints (Vegetarian/No-Red-Meat) via vision sensors.
Bajrangi	Governance	The Safety Veto. Holds root authority to mute all performance agents based on real-time HRV data or high-priority family logistics (e.g., 3rd-trimester coordination).
The Voyager	Logistics	Manages the "Deep-Cut" research for international travel (India/Japan), handling visa statuses and local itineraries asynchronously.

4. Technical Governance & Critical Path

4.1 The Intent Ledger Schema

To support 20+ agents without collision, the runtime utilizes a **State-Machine Ledger**:

- **Observations:** Passive data landing zone (Watch vitals, Calendar, Vision logs).
- **Intents:** Hard-coded North Stars (80kg goal, deadlift targets).
- **Work Orders:** Agents publish requested actions (e.g., "Request 200mg Caffeine").
- **Governance Log:** Bajrangi audits and marks orders as **Approved**, **Modified**, or **Vetoed**.

4.2 The "Universal Sniff Test" (Global PMF)

To ensure the platform scales, every agent must pass the **Universal Human Friction Test**.

- **Generalization:** We don't build a "Coffee Agent"; we build a **Ritual Optimization Agent**.
 - **Zero-Input Constraint:** If the user has to type data, the feature is a failure. Ingestion must be ambient (Watch) or vision-based (Photo).
-

5. Roadmap: The Critical Path

- **P0 (Infrastructure):** Finalize the Mac Mini M4 local environment and establish the **OpenClaw Heartbeat** (sub-100ms latency).
 - **P1 (Vitality Bridge):** Deploy the **Xcode-based Apple Watch sensor** to feed the Intent Ledger autonomously.
 - **P2 (Governance Activation):** Implement the **Bajrangi Veto Logic** to prioritize family and recovery over performance nudges.
 - **P3 (Visual Audit):** Enable the **Foodie Agent** to perform real-time dietary compliance audits via vision models.
-

6. Success Metrics

- **Cognitive Load Reduction:** Measured by the decrease in manual health/logistics app interactions.
- **Intent Realization:** Hitting the 80kg and 155kg deadlift milestones by July 1, 2026.
- **Sukoon (Peace):** Zero "Hustle-Culture" friction during periods of low recovery or high family priority.
